The global Cycle Computer market size is predicted to grow from US\$ 317 million in 2025 to US\$ 482 million in 2031; it is expected to grow at a CAGR of 7.3% from 2025 to 2031.

A Cycle Computer is a device mounted on a bicycle that calculates and displays trip information, similar to the instruments in the dashboard of a car. The computer with display, or head unit, usually is attached to the handlebar for easy viewing.

Cycle computers help you make the most of your time on the bike and are a great training tool, they have many functions including speed, distance, maximum speed, average speed and some even feature cadence (pedal revolutions). Trying to keep your average speed a bit higher or finish a familiar route in a new record time will give you the inspiration needed to push harder, get fitter and achieve that goal. If you commute on the same route every day, a computer injects a bit of interest. Cordless computers are easier to fit and look neater on the bike, meaning no messy cables to try and tidy up. If you're serious about improving your fitness, a computer with a cadence function will really help and these often read from the rear wheel, allowing them to be used with a turbo trainer.

Global Cycle Computer key players include CatEye, Sigma Sport, Garmin, etc. Global top three manufacturers hold a share over 40%.

Europe is the largest market, with a share over 30%, followed by China, and North America, both have a share over 30 percent.

In terms of product, Wireless Computer is the largest segment, with a share over 40%.

And in terms of application, the largest application is Mountain Bike, followed by Road Bike, etc.
