The global Cycling Refrigerated Air Dryers market size is predicted to grow from US\$ 325 million in 2025 to US\$ 467 million in 2031; it is expected to grow at a CAGR of 6.2% from 2025 to 2031.

Unlike the non-cycling refrigerated air dryers, the Cycling Refrigerated Air Dryers uses additional equipment such as thermal mass or frequency controllers, which would allow the dryer to turn on and off based on the compressed air demand coming into the dryer, ultimately making it much more energy efficient. The cycling dryer design comes with a totally customer oriented design, offering performance as well as reliability. The initial cost of the cycling dryer is marginally higher than that of a non-cycling option, but it does provide the lowest, long term solution and lowest life-cycle cost. Cycling dryers are very reliable and offer the convenience of easy installation, small footprint and low noise level. As previously mentioned, cycling dryers offer maximum energy savings and low pressure drops. Due to its advantages, the slightly higher cost of a cycling dryer can be very beneficial to any compressed air system, especially when considering the overall life-cycle cost of the equipment. If your application experiences fluctuating air demand a cycling dryer is most beneficial to you.

Global Cycling Refrigerated Air Dryers key players include Atlas Copco, Ingersoll Rand, Parker Hannifin, SPX Flow, Sullair, etc. Global top five manufacturers hold a share about 50%.

Europe is the largest market, with a share about 45%, followed by North America and Asia-Pacific, both have a share over 50 percent.

In terms of product, Air-cooled is the largest segment, with a share over 60%. And in terms of application, the largest application is General Industry, followed by Energy.
