Abstracts

The global Cycloconverter market size is predicted to grow from US$ 165 million in 2025 to US$ 233 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

In 2024, global Cycloconverter production reached approximately 246 k units , with an average global market price of around US$ 650 per unit. Cycloconverter is a type of power electronic converter, its function is to fix the frequency, fixed voltage AC, directly converted to variable frequency, variable voltage AC, without the need for intermediate DC link. The cycloconverter market presents a typical "dual-track" development trend: on the one hand, in the traditional advantage markets such as ship propulsion and heavy industry, its demand is solid and stable, and the core lies in reliability, power processing capability and cost-effectiveness; on the other hand, in emerging fields such as micro-inverters, high-frequency cycloconverters based on wide-band semiconductors represent high-efficiency, high-power density technology frontiers with huge growth potential.

The annual production capacity of a single production line for cycleconverters is typically 3,000-5,000 units/year, with a gross profit margin of around 25%.

Downstream consumption of cycleconverters is as follows: industrial machinery 52%, marine propulsion 23%, other 25%.

United States market for Cycloconverter is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Cycloconverter is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
