The global Cyclone Dry Air Scrubbers market size is predicted to grow from US$ 1237 million in 2025 to US$ 1716 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

In 2024, global sales of cyclone dry air scrubbers (also known as cyclone separators) will reach approximately 930,000 units, with an average price of approximately US$1,300 per unit and a gross profit margin of 33%. Cyclone dry air scrubbers are a type of air purification and gas-solid separation equipment that uses centrifugal force to remove particulate matter or dry powder impurities from dust-laden air. They feature simple structure, low operating costs, and high-temperature and corrosion resistance. They are widely used in dust removal and emission control in industries such as building materials, metallurgy, power generation, chemicals, and grain processing. Upstream demand primarily relies on wear-resistant steel plates, ceramic or silicon carbide linings, and high-temperature seals; downstream customers are concentrated in cement, steel smelting, power generation, grain processing, and chemical industries. Zeppelin Group has an annual production capacity of approximately 100,000–110,000 units, primarily in Europe and North America, and maintains a leading position in plastics processing and bulk material handling systems.

United States market for Cyclone Dry Air Scrubbers is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
