The global Cyclone Preheater market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A cyclone preheater, also known as a suspension preheater, is a component of a cement manufacturing process that helps to preheat and calcine raw materials before they enter the rotary kiln for clinker production. In the cement production process, raw materials such as limestone, clay, shale, and iron ore are crushed and ground into a fine powder. This powder, known as raw meal, is then fed into the cyclone preheater system. The cyclone preheater consists of several stages of cyclones, which are cylindrical devices with cone-shaped bottoms. Each cyclone is connected in series, with the gas and raw meal flowing through them in a specific order.
