COX inhibitors are mostly antipyretic and analgesic anti-inflammatory drugs, namely non-steroidal anti-inflammatory drugs (NSAIDs). COX-2 has extremely low activity in normal tissue cells, and can only be produced in large quantities when induced. It mediates pain, inflammation, and fever by promoting PG synthesis. In general, multiple adverse effects of non-steroidal anti-inflammatory drugs are believed to be related to the inhibition of COX-1. As a result, COX-2 selective inhibitors have emerged.
