## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Cycloplegic agents act by paralyzing the iris's sphincter muscle, causing dilation, and by paralyzing the ciliary muscle, which inhibits accommodation. Atropine, homatropine, scopolamine, cyclopentolate, and tropicamide are examples of cycloplegic agents. Preventing movement of the iris or ciliary body's dilator and sphincter muscles with cycloplegic drugs often relieves pain in inflammatory conditions such as uveitis and is a standard therapeutic procedure. Furthermore, as a result of the local release of prostaglandins, the iris usually constricts during irritation or inflammation. This makes it easier for adhesions to form with the lens. Cycloplegics also aid in the prevention of this complication.

The global market for Cycloplegic Agents is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Cycloplegic Agents market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Cycloplegic Agents market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
