The global Cylinder Head Bolts market size is predicted to grow from US\$ 1243 million in 2025 to US\$ 1701 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

In 2024, global sales of cylinder head bolts reached 320 million units, with an average selling price of \$3.80. Cylinder head bolts are crucial fasteners used to secure the engine cylinder head to the cylinder block. They are typically made of high-strength alloy steel and undergo heat treatment and surface corrosion protection. They possess excellent tensile strength, fatigue resistance, and high-temperature stability, ensuring sealing and structural strength during internal combustion engine operation. They are widely used in passenger car, commercial vehicle, and construction machinery engines. Upstream raw materials primarily include alloy steel bars, heat treatment equipment, and surface coating materials. Suppliers include Baosteel, Ansteel, Nippon Steel, and Voestalpine. Downstream customers include engine manufacturers such as Volkswagen, Toyota, Ford, General Motors, BYD, Cummins, and Weichai Power. With the rapid development of new energy vehicles and hybrid vehicles, cylinder head bolts will evolve toward lightweight materials, high-temperature-resistant alloys, and intelligent tightening monitoring. Market demand is expected to remain stable, with a trend toward structural upgrades.

The overall cylinder head bolt market is showing a trend of steady growth and gradual upgrading. On the one hand, traditional fuel vehicle engines remain the primary source of market demand. As key fasteners, cylinder head bolts require extremely high heat resistance, fatigue resistance, and long-term reliability. The market size remains stable, and replacement demand persists. On the other hand, the rapid development of new energy vehicles presents new challenges and opportunities for the cylinder head bolt market. While electric vehicles have reduced the demand for engine-related components, hybrid and some extended-range vehicles still rely on high-performance

internal combustion engines, increasing demand for lightweight, high-strength bolts. Furthermore, automakers' pursuit of overall vehicle weight reduction and energy efficiency is driving the development of new materials (such as titanium alloys and specialty steels) and surface coating processes for bolts. International leading companies maintain their technological advantages in the high-end market, while Chinese and Indian companies are rapidly penetrating the mid- and low-end markets. Future market competition will focus on the combination of lightweighting, high strength, and intelligent monitoring. Cylinder head bolts are likely to become part of intelligent fastening solutions, offering a solid application foundation and potential for development in the global automotive industry's transformation.
