The global Cylinder Timing Control Integrated Hot Runner System market size is predicted to grow from US\$ 382 million in 2025 to US\$ 536 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

The cylinder-driven sequential hot runner system is an injection molding system based on the needle valve hot runner system. It uses cylinders to drive valve needles to open or close gates in a set sequence, allowing the melt to flow sequentially and evenly into the mold, improving the consistency of gate marks, weld lines, and the finished part.

Upstream components mainly include mold steel, manifold/nozzle materials, heaters, thermocouples, seals, cylinders, solenoid valves, timing controllers, and temperature control elements. Downstream applications are primarily in precision injection molding products such as automotive, medical, packaging, home appliances, electronic connectors, and everyday item covers.

The global unit price of a cylinder-driven sequential hot runner system is \$6,200, with annual sales of approximately 63,000 units, global production capacity of 70,000 units, and an industry profit margin of 13.5%.
