The global Cylindrical Battery Stacking Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The cylindrical battery stacking machine automatically realizes the stacking process of the battery core, stacks the positive electrode sheet, diaphragm, and negative electrode sheet in order to form a small battery cell, and then stacks and connects the small battery cells in parallel to form a large battery cell. During the stacking process, the diaphragm is actively unwound, and the stacking table drives the diaphragm to move back and forth to form a Z-shaped stack. After the stacking is completed, it is cut according to the set length and automatically sent out for manual glue application.
