The global Cylindrical Battery X-ray Imaging Inspection market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Cylindrical Battery X-ray Imaging Inspection, or cylindrical battery X-ray imaging inspection technology, is a non-destructive inspection technology designed specifically for inspecting and analyzing the internal structure and defects of cylindrical batteries. This technology uses the penetrating properties of X-rays to penetrate the cylindrical battery through the X-ray beam emitted by the X-ray source, and then uses the detector to receive the attenuated X-rays after passing through the battery and convert them into electrical signals. These electrical signals can be processed to form an image of the inside of the battery, thereby realizing the detection of the internal structure and defects of the battery.
