A Cylindrical Mandrel Bend Tester is a mechanical testing device used to evaluate the flexibility and ductility of materials, particularly thin films, laminates, and coatings. The tester consists of a cylindrical mandrel or rod with a specified diameter around which the test specimen is wrapped or bent. The specimen is securely clamped onto the mandrel, and a specified force is applied to bend it around the cylinder. The bend radius and angle of the specimen are measured during the test to assess its ability to withstand bending without cracking, delamination, or other forms of damage. Cylindrical Mandrel Bend Testers are commonly used in industries such as packaging, plastics, coatings, and electronics to determine the suitability of materials for applications where flexibility and durability are important considerations. This testing method helps manufacturers ensure that their products meet quality standards and performance requirements.

The global Cylindrical Mandrel Bend Tester market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
