Cystatin C Human ELISA Kit is a laboratory assay kit used in medical and clinical research to measure the concentration of Cystatin C in human blood or other biological samples. Cystatin C is a protein produced by most nucleated cells in the human body and is primarily used as a marker for kidney function. It is freely filtered through the glomerular filtration barrier in the kidneys and is almost completely reabsorbed and catabolized in the renal tubules. This ELISA (Enzyme-Linked Immunosorbent Assay) kit provides a quantitative and accurate measurement of Cystatin C levels in biological samples.

The global market for Cystatin C Human ELISA Kits has witnessed growth, primarily driven by the increasing prevalence of kidney-related disorders and the growing

awareness of the importance of kidney function testing. North America and Europe have been significant markets for Cystatin C Human ELISA Kits due to the high prevalence of kidney diseases and established healthcare infrastructure. Asia-Pacific has exhibited substantial growth, driven by increasing healthcare spending, a growing patient population, and a greater emphasis on preventive healthcare. Other regions, including Latin America, the Middle East, and Africa, have shown potential for market growth, as awareness of kidney health and diagnostic capabilities improve.
