Cytotherapy is a therapy in which viable cells are injected, grafted or implanted into a patient in order to effectuate a medicinal effect, for example, by transplanting T-cells capable of fighting cancer cells via cell-mediated immunity in the course of immunotherapy, or grafting stem cells to regenerate diseased tissues.

The cytotherapy market is driven by the increasing demand for regenerative medicine and cell-based therapies, offering potential treatments for a range of diseases and conditions. Stem cell therapies and other cell-based approaches hold promise for addressing previously untreatable conditions. However, a significant challenge in this market is the need for rigorous clinical trials and regulatory approvals to ensure the safety and efficacy of these therapies. Developing standardized protocols and

navigating complex regulatory pathways can be time-consuming and costly. Additionally, the cost of cytotherapy treatments and access to these innovative therapies remain challenges, requiring healthcare systems and insurance providers to address affordability and accessibility issues.
