According to our (LP Info Research) latest study, the global D-mode GaN Transistor market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the D-mode GaN Transistor is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global D-mode GaN Transistor market. With recovery from influence of COVID-19 and the Russia-Ukraine War, D-mode GaN Transistor are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of D-mode GaN Transistor. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the D-mode GaN Transistor market.

“D-mode” refers to “Depletion-mode” GaN (gallium nitride) transistors. Depletion-mode GaN transistors are a type of field-effect transistor (FET) that operate based on the principle of channel depletion. In a depletion-mode GaN transistor, the channel between the source and drain regions is naturally conductive, without the need for an external voltage to turn it on. Hence, these transistors are normally ON by default and turn OFF when a negative voltage is applied to the gate terminal.
