Abstracts

The global D-Phenylalanine market size is predicted to grow from US$ 101 million in 2025 to US$ 154 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2024, global D-Phenylalanine production was approximately 800 tons, with an average selling price of about US$121/kg. Single-line capacity was approximately 120 tons/year, with an average gross profit margin of approximately 20-30%. D-Phenylalanine is an atypical, enantiomeric chiral intermediate, appearing as a white or grayish-white powder or crystalline solid at room temperature. It has important applications in organic synthesis and biochemistry, particularly in the preparation of pharmaceutical and pesticide intermediates and in the modification of biomolecules. D-phenylalanine also acts as an inhibitor of bacterial biofilm formation and plays a crucial role in research and new drug development.

Upstream raw materials mainly include benzaldehyde, hippuric acid, and diethyl acetylaminomalonate used in chemical synthesis and fermentation processes, as well as cinnamic acid or phenylpyruvic acid, substrates required for enzymatic biotransformation. Downstream applications are concentrated in the pharmaceutical, health supplement, and food industries. In the pharmaceutical field, it is used as a chiral synthon in the preparation of antibiotics and diabetes drugs, while in the health supplement field, it is directly used in the formulation of dietary supplements for relieving chronic pain and managing mood.

United States market for D-Phenylalanine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
