D50 Crystalline Silica Powder is a silicon powder product with a specific particle size distribution. It is made of natural quartz and processed through sorting, crushing, purification, grinding, grading and other processes to form a α -crystalline silicon dioxide powder material. "D50" represents the particle size distribution parameter, and the D50 value is in the range of 0.5~50 μ m, depending on the control in the production process.

Crystalline silicon powder has stable chemical properties, high and low temperature resistance, strong acid and alkali corrosion resistance, good thermal conductivity, good fluidity, high insulation, and low expansion. It is widely used in semiconductors, electronics, copper clad laminates, ink coatings, adhesives, composite materials, silicone rubber, cosmetics, special ceramics and other fields.
