D50 Spherical Silica Powder is a spherical silica powder material with small specific surface area, good fluidity and low stress. Irregular quartz powder particles are instantly melted at high temperature, then spheroidized under the action of surface tension, and finally processed by cooling, grading, mixing and other processes. "D50" represents the parameter of particle size distribution, and the D50 value is in the range of 2-50 μ m.

Spherical silica powder has unique physical and chemical properties such as high heat resistance, high insulation, low linear expansion coefficient and good thermal conductivity. It is widely used in electronic packaging, chemical coatings, ceramics, aerospace, metallurgy, precision casting, polishing and grinding and other fields.

United States market for D50 Spherical Silica Powder is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
