## Abstracts

The global Daily-use Glass Bottles market size is predicted to grow from US\$ 45511 million in 2025 to US\$ 61498 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

In 2025, the global production of daily-use glass bottles reached approximately 93 billion units, with an average global market price of around US\$0.3 - \$0.8 per unit. In the same year, the global total production capacity of daily-use glass bottles reached 124 billion units. The industry average gross profit margin of this product reached 35%. Daily-use glass bottles are hollow containers made primarily from raw materials such as quartz sand, soda ash, and limestone, through processes including high-temperature melting, molding, and annealing. They are mainly used for packaging and storing food, beverages, alcoholic beverages, condiments, cosmetics, and daily chemical products. Their core characteristics include strong chemical inertness, air tightness, impermeability, reusability, and unlimited recyclability, making them irreplaceable in consumer product packaging requiring high safety, freshness preservation, and a premium feel.

The upstream of the daily-use glass bottle industry chain involves mining and energy, including the supply of raw materials such as quartz sand, soda ash, limestone, and crushed glass, while also involving high-energy-consuming factors such as natural gas and electricity. The midstream comprises glass bottle manufacturers, covering processes such as batching, melting, molding, annealing, surface treatment, and deep processing. The downstream encompasses a wide range of application industries, including beverages, alcoholic beverages, and cosmetics, ultimately reaching end-consumer markets through brand owners, distributors, and retail channels. Overall, the industry is characterized by 'resources + high-energy-consuming manufacturing +

consumer product packaging.' The daily-use glass bottle industry is expected to maintain steady growth in the future, driven by a triple logic of 'environmental substitution + consumption upgrading + pharmaceutical expansion.' On the one hand, global plastic restriction policies and sustainable development trends have strengthened the advantages of glass as an infinitely recyclable material. On the other hand, the increasing demand for high-quality packaging and brand expression from high-end alcoholic beverages, functional drinks, and cosmetics is driving the industry structure towards higher value-added products. However, the industry also faces challenges such as high energy costs, competition from alternative materials, and carbon emission constraints. Therefore, the future development pattern will be characterized by 'stable overall growth + structural upgrading + green manufacturing.'
