## Abstracts

The global Damped Check Valve market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The damped check valve is media driven and responds only to the differential pressure inside the valve. In normal operation, the valve flap is pressed into the open position by the flow of feed water from inlet A to outlet B. When the flow of water stops, the valve flap closes. The closure is damped to avoid pressure fluctuations in the pipeline.
