According to this study, the global Dark Factory market size will reach US$ 45576 million by 2031.

A dark factory is a production site where machines handle every task—assembly, inspection, and logistics—eliminating the need for human presence. Without workers, there's no need for lighting, heating, or breaks, reducing energy costs and boosting efficiency. While fully operational dark factories are still rare globally, China's rapid adoption of automation suggests they are becoming a reality.
