The dashboard airbag weakening machine is a precision laser processing equipment specially used for the production of automobile dashboard airbags. It performs local weakening treatment on the airbag by precisely controlling the laser energy to optimize the deployment performance of the airbag in the event of an accident and reduce the impact on the passengers. The equipment adopts high-precision positioning technology to ensure the accuracy and consistency of the weakening treatment, and at the same time has efficient automated operation capabilities, greatly improving production efficiency. Its advantage lies in the ability to precisely control the degree of weakening, adapt to the processing requirements of different vehicle models and airbag specifications, and reduce material waste and labor costs.
