Data as a Service (DaaS) software is a collection of tools that use a cloud-based network to manage data. Companies using DaaS software can provide data to consumers on demand. DaaS is a data management strategy that aims to democratize and operationalize data, internally or externally. Data as a Service (DaaS) providers provide data from various sources and through APIs. DaaS architecture can also include technologies such as data virtualization and data cataloging. Data-as-a-service solutions are closely related to software-as-a-service (SaaS) platforms. Just like software can now be delivered over the web or the cloud without downloading and installing, DaaS companies enable organizations to store and manage data on the cloud with greater flexibility to scale. DaaS software can be used externally via APIs. These software platforms help break down data silos by making data available to various business functions. Various departments such as marketing, finance, and operations can access data remotely through the cloud.

The global Data as a Service (DaaS) Software market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
