The global Data Baluns market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Data baluns connect balanced lines to unbalanced lines in data transmission applications. They allow two different cable types to be joined together with a minimum amount of electrical gradation. Single-path data baluns provide an interface between older 75-ohm coaxial systems and 100-ohm or 120-ohm twisted pair wiring. Dual-path data baluns allow two different coaxial signals to be carried over a single length of twisted pair wire. Product specifications for both types of data baluns include maximum working voltage, isolation voltage, screen coupling, transient energy, direct current (DC) spark-over, impulse discharge, impedance and insertion loss. Features include onboard protection against lightning and transient spikes.

United States market for Data Baluns is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Data Baluns is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
