Data Buoy Monitoring Platform is an advanced system designed to collect and transmit environmental data from bodies of water. It consists of a buoy equipped with sensors that measure various parameters such as temperature, salinity, pH, water quality, and wave height. These buoys are typically deployed in oceans, lakes, or rivers and send real-time data to a central system for analysis. The platform is widely used in marine research, weather forecasting, and environmental monitoring, providing valuable insights for scientists, researchers, and environmental agencies to assess and manage water conditions, track climate change, and monitor aquatic ecosystems. The price of a data buoy monitoring platform varies greatly, depending on factors such as the type of sensors and technology used. However, the unit price is approximately $5k to $10k.
