The global Data Center Accelerator Card market size is predicted to grow from US\$ 1528 million in 2025 to US\$ 2286 million in 2031; it is expected to grow at a CAGR of 6.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Modern data centers are being transformed to increase networking bandwidth and optimize workloads like artificial intelligence. Data center administrators also expect lower TCO, lower power, and new services. Data centers accelerators are helping customers meet these demands. The data centers accelerators facilitate a significant increase in the performance of these data centers. Moreover, due to resource sharing with the main processor, accelerators and general-purpose processors in data centers consume less power. The growing demand for AI in HPC data centers is driving the market growth. The growth in consumer-generated data and increasing use of AI-based services have propelled the demand for AI-centric data centers.

Data center is a key driver of this industry. Global data center market revenue is expected to reach \$342 billion by 2023, up from \$321 billion in 2022. The world has approximately 8,000 physical data centers as of 2022. The US has 2,701 data centers. The second country with the largest data center number is Germany, with 487 centers, followed by the UK (456), China (443), and Canada (328).
