The global Data Center FEP Resin market size is predicted to grow from US\$ 475 million in 2025 to US\$ 753 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Data Center FEP Resin refers to fluorinated ethylene propylene resin used in high-speed data transmission cables, server wire harnesses, connector insulation, coaxial cables, backplane interconnects, and other electronic insulation components in data centers. FEP offers excellent high-temperature resistance, low dielectric constant, low dielectric loss, chemical resistance, and flame-retardant performance, making it suitable for 400G, 800G, and higher-speed DACs, AECs, internal server cables, and high-frequency signal transmission components. It helps reduce signal attenuation, improve transmission stability, and meet the requirements of high-density data centers for low-loss, high-reliability, and safety-critical materials. In 2025, global Data Center FEP Resin production reached approximately 43 k tons, with an average global market price of around US\$11300 per ton. The production capacity for Data Center FEP Resin in 2025 was approximately 45 k tons. The typical gross profit margin for Data Center FEP Resin between 20% and 40%.

The Data Center FEP Resin market is mainly driven by AI servers, high-speed switches, 400G/800G/1.6T interconnects, cloud computing infrastructure, and high-density data center construction. As DACs, AECs, QSFP-DD, OSFP, and internal server cables require lower dielectric loss, better heat resistance, and stronger flame-retardant performance, FEP is increasingly used in insulation and jacket materials for high-end data communication cables. Market growth is mainly supported by AI data centers and high-speed network upgrades, while high FEP prices, tightening PFAS regulations, competition from alternative materials, and concentrated supply of high-end

fluoropolymers remain key restraints.
