Data Center Immersion Fluids are specialized liquids that are used for cooling electronics in a data center. These fluids are designed to be non-conductive and non-corrosive to the electronic components they come in contact with. By immersing the electronics in the fluid, heat can be rapidly removed, allowing for higher computing power and lower energy costs. Data center immersion fluids are mainly used for high-performance computing, artificial intelligence, and other data-intensive applications.

The global Data Center Immersion Fluids market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
