The global Data Center Optical Fiber Cable market size is predicted to grow from US\$ 3747 million in 2025 to US\$ 8110 million in 2032; it is expected to grow at a CAGR of 11.7% from 2026 to 2032.

Data Center Optical Fiber Cable refers to fiber-optic cabling specifically designed for high-speed data transmission within and between data centers. It typically consists of optical fibers, fiber units, protective jackets, and connectors or termination components. Its primary function is to transmit large volumes of data with low latency between servers, switches, storage systems, racks, and other network equipment using optical signals. Compared with conventional telecommunication fiber cables, data center optical fiber cables place greater emphasis on high-density cabling, low insertion loss, bend performance, space efficiency, ease of installation, and high-speed transmission, and are widely deployed in 10G, 25G, 40G, 100G, 200G, 400G, 800G and emerging 1.6T data center networks. In 2025, global Data Center Fiber Optic Cable production reached approximately 912 million meters, with an average global market price of around US\$4.20 per meter. Annual production capacity is estimated at 1.20 billion meters. Gross Profit Margin: 32.5%. The industry chain of Data Center Optical Fiber Cable starts upstream with key materials such as optical fiber preforms, silica glass, fiber coatings, aramid yarn, polymers, and connectors. Midstream manufacturers draw and coat optical fibers and then assemble them into simplex, duplex, MPO/MTP, trunk, breakout, and other high-density fiber cables. Downstream demand comes mainly from hyperscale data centers, cloud service providers, AI/HPC data centers, telecommunications operators, and enterprise data centers, with higher-speed 400G, 800G, and 1.6T networks driving demand for higher-density and lower-loss fiber connectivity. Data Center Optical Fiber Cable is becoming an increasingly important physical infrastructure product as AI clusters expand and network bandwidth

requirements rise rapidly. Product value is shifting from basic cabling toward high-density, pre-terminated, low-loss, and installation-efficient solutions, while the transition from 400G to 800G and ultimately 1.6T is expected to strengthen demand for advanced fiber connectivity. Manufacturing scale, fiber quality, connector reliability, and the ability to support customized high-density deployments are likely to become the key competitive factors.

United States market for Data Center Optical Fiber Cable is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Data Center Optical Fiber Cable is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Data Center Optical Fiber Cable is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Data Center Optical Fiber Cable players cover Corning Incorporated, Prysmian Group, CommScope Holding Company, Inc., Fujikura Ltd., Furukawa Electric Co., Ltd., etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
