## Abstracts

The global Data Center Proxy Service market size is predicted to grow from US\$ 403 million in 2025 to US\$ 606 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Data Center Proxy Service refers to a high-speed, stable, and anonymous network access relay service provided to users through a cluster of proxy servers deployed in a data center. Its core principle is to forward user request traffic via data center IP addresses, thereby hiding the real IP address and achieving geographic location spoofing. This service features high bandwidth, high availability, and a massive IP pool, and is widely used in scenarios such as web crawling, ad verification, e-commerce operations, and brand protection. Unlike residential proxies, data center proxies are faster but have higher identification accuracy. They are typically billed by bandwidth or the number of IPs, and are a key infrastructure for enterprise-level data collection and business risk control testing.

The global Data Center Proxy Service market is steadily expanding driven by demands for big data collection, ad verification, and cross-border business. North America and Europe, as mature markets, leverage leading cloud computing infrastructure, abundant IP resources, and stringent data privacy regulations to hold leading positions in high-anonymity proxies, enterprise-grade static IP proxies, and API scheduling platforms. The Asia-Pacific region is the fastest-growing and most competitive sector, with China and Southeast Asian countries experiencing rapid adoption of hybrid solutions combining rotating proxies, residential proxies, and data center proxies, fueled by the overseas expansion of e-commerce, social media, and gaming. Local service providers are rapidly emerging. The Middle East and Latin America focus on regional market coverage and localized business expansion. The industry as a whole is accelerating its

evolution towards global IP resource pools, intelligent rotating algorithms, and anti-detection browser integration.
