Data erasure (sometimes referred to as data clearing or data wiping) is a software-based method of overwriting the data that aims to completely destroy all electronic data residing on a hard disk drive or other digital media by using zeros and ones to overwrite data onto all sectors of the device.

The prominent reason supporting and driving the growth of data erasure solutions is the adoption of cloud data models by enterprises, and private and government organizations to optimize operational capabilities. Another factor responsible for the growing demand for data erasure solutions is the increasing complexity of the enterprise network which connects all the computers and associated devices of the organization at different locations.
