According to our LPI (LP Information) latest study, the global Data Historian market size was valued at US\$ 1261.1 million in 2023. With growing demand in downstream market, the Data Historian is forecast to a readjusted size of US\$ 2032.2 million by 2030 with a CAGR of 7.1% during review period.

The research report highlights the growth potential of the global Data Historian market. Data Historian are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Data Historian. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Data Historian market.

A Data Historian (also known as a Process Historian or Operational Historian) is a software program that records and retrieves production and process data by time; it stores the information in a time series database that can efficiently store data with minimal disk space and fast retrieval. Time series information is often displayed in a trend or as tabular data over a time range (ex. the last day, last 8 hours, last year).

A data historian could be applied independently in one or more areas, but it can really show its worth when applied across an entire facility, many facilities in a department, and across departments within an organization. One could discover that a production problem's root cause is insufficient brine supply to the production equipment or one could discover the 2 similar units produce significantly different results over time.
