The global Data Science as a Service market size is predicted to grow from US\$ 2115 million in 2025 to US\$ 3380 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

To address the problems of insufficient enterprise data analysis capabilities, a shortage of professional talent, and high investment in technical infrastructure, Data Science as a Service (DSaaS) has emerged. Since the rise of cloud computing in the early 21st century, accompanied by the maturation of machine learning platforms and automation tools, the field of data intelligence applications has entered a phase of accelerated development. Currently, DSaaS has developed into a multi-layered service system encompassing cloud computing power, pre-built models, automated machine learning platforms, and end-to-end analytical solutions. It is widely used in areas such as financial risk control, intelligent marketing, industrial predictive maintenance, and business decision optimization, providing a professional cloud service model that significantly lowers the threshold for data intelligence applications, improves analysis efficiency, and enhances business value.
