## Abstracts

The global Data Security Posture Management (DSPM) market size is predicted to grow from US\$ 1740 million in 2025 to US\$ 3583 million in 2032; it is expected to grow at a CAGR of 11.1% from 2026 to 2032.

Data Security Posture Management (DSPM) refers to a category of continuous security management capabilities or platforms designed to protect an organization's enterprise-wide data. Its core goal is to address visibility and closed-loop governance challenges—namely where data is, whether it is sensitive, who it is exposed to, how risky it is, and how to remediate it—especially when data is distributed across multi-cloud environments, on-premises systems, and SaaS applications. A typical DSPM solution connects to cloud storage, databases, data warehouses, and collaboration/office suites through agentless or lightweight integrations. It automatically discovers data assets and identifies, classifies, and labels sensitive information such as PII, PCI, PHI, and development secrets/keys, generating a data map and an overarching security posture view. This helps locate high-risk conditions including public exposure, weak encryption, misconfigurations, expired or improperly stored data, as well as shadow data, cross-account replication, and excessive privileges. Some platforms can also detect how data moves and proliferates through ETL processes, data pipelines, migrations, backups, and cross-region replication, enabling organizations to trace sensitive data flows and define alerting policies. DSPM commonly provides risk prioritization and compliance-oriented insights, producing actionable remediation guidance and ticket-based workflows. It may integrate with cloud identity and policy controls to enforce least-privilege data access governance (DAG). In addition, through near-real-time activity alerts and Data Detection and Response (DDR) capabilities, DSPM can identify suspicious behaviors such as abnormal reads, bulk downloads, or potential exfiltration—supporting investigation and containment. DSPM is typically delivered via

SaaS subscriptions, as built-in modules within cloud security or data security centers, or embedded into broader data governance and compliance suites. It is used to protect cloud data, reduce risks from ransomware and insider threats, and to provide visibility, risk assessment, and continuous compliance for data used in generative AI and Copilot-like training and inference scenarios.

DSPM is increasingly treated by enterprises as a long-term operational capability rather than a one-time tool deployment. In many organizations, data is spread across multiple clouds, on-premises data centers, and various SaaS applications. As new business systems are introduced, projects migrate, and personnel changes occur, data assets keep shifting, making it difficult for security teams to maintain a complete picture through annual inventories or sample-based audits. What organizations need in practice is the ability to answer, at any time, several key questions: where the data is, which datasets are sensitive or important, who the data is exposed to, how to prioritize risk, and whether remediation can be validated and sustained over time. If these questions cannot be answered reliably, compliance reviews, outsourcing collaboration, internal permission changes, and new business launches can all amplify risk. The value of DSPM lies in turning discovery, classification, exposure assessment, and access relationships into a continuously updated view, and translating risk into executable tasks so governance shifts from experience-driven decisions to evidence-based processes. In this context, enterprises care less about how many issues a single scan finds, and more about whether a stable daily mechanism exists. For example, when a new data warehouse is added or a shared directory is opened, the system can automatically identify sensitive fields and flag compliance impact; when permissions expand, it can detect deviations from least privilege; and when data is copied to an inappropriate location, it can trace the source and destination. Prioritizing risks, assigning ownership, and recording remediation results as auditable evidence are what make ongoing investment more justifiable. In many industries, generative AI and data development are further increasing this demand: once training and inference data enters more pipelines, only continuous visibility and control can keep pace with change.

In terms of delivery models, the market broadly follows two routes. One route is standalone DSPM platforms. Their advantage is higher specialization, typically focusing on broad coverage across data sources and stronger data-context understanding. They can place cloud object storage, databases, data warehouses, and collaboration suites into a unified data map, analyze sensitive discovery, exposure, excessive privileges, shadow data, and uncontrolled replication in depth, and convert remediation recommendations into tickets and workflows. The other route is embedding DSPM as a module within cloud security platforms or data security centers, delivered together with

identity and access management, cloud configuration controls, alert handling, and compliance reporting. This lowers procurement friction and fits more naturally into existing operations. Many enterprises do not want to introduce yet another isolated system; they prefer to complete discovery, assessment, remediation, validation, and continuous monitoring within a single platform. These two routes will coexist, but the focus is shifting from feature checklists to implementation efficiency. Standalone vendors need to demonstrate not only that they can find problems, but that they can drive fixes—for example, linking risks to business assets, data owners, and access paths, supporting accountability assignment and closure tracking. They also need to integrate more openly with major cloud providers and security platforms to avoid being seen as an island. Platform vendors, meanwhile, must address depth: they cannot stop at high-level metrics, but need finer-grained sensitive identification, clearer visibility into data movement and sharing risks, and sufficient connectors and governance actions to make the module truly usable. Ultimately, the product direction looks like an operational capability layer that is both broad in coverage and deep enough in critical data environments.

Industry competition is also evolving. Leading vendors are more likely to win enterprise customers not only because of brand, but because they can offer more complete delivery loops and stronger ecosystem collaboration. Large customers typically require coverage across multi-cloud and hybrid environments, stable connectors, permission models that map to real systems, and remediation processes that are traceable, auditable, and measurable—capabilities that demand sustained investment in engineering and customer success. Meanwhile, smaller vendors that focus only on single-point functions—such as sensitive discovery alone or exposure detection alone—are more likely to be marginalized as platforms progressively fill these capabilities as modules. As a result, consolidation and M&A become more common. Once capabilities are absorbed into larger platforms, customers gain broader coverage with fewer systems, and vendors expand reach through established channels and suite-based delivery. In this landscape, differentiation concentrates in three areas. First is balancing coverage and accuracy: scaling quickly across many data sources while reducing false positives and false negatives in critical systems. Second is the operability of closed-loop governance: translating risk into concrete actions, integrating with permissions and policies to enforce least privilege, and validating fixes continuously to prevent regression. Third is adapting to emerging scenarios such as data sharing, cross-team collaboration, and generative AI introducing data into more pathways. Vendors that turn these capabilities into operational workflows and capture outcomes as reusable evidence are more likely to secure long-term budgets and higher renewal stickiness, and to establish standardized delivery within platform ecosystems.

LPI (LP Information)' newest research report, the 'Data Security Posture Management (DSPM) Industry Forecast' looks at past sales and reviews total world Data Security Posture Management (DSPM) sales in 2025, providing a comprehensive analysis by region and market sector of projected Data Security Posture Management (DSPM) sales for 2026 through 2032. With Data Security Posture Management (DSPM) sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US\$ millions of the world Data Security Posture Management (DSPM) industry.

This Insight Report provides a comprehensive analysis of the global Data Security Posture Management (DSPM) landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyses the strategies of leading global companies with a focus on Data Security Posture Management (DSPM) portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global Data Security Posture Management (DSPM) market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Data Security Posture Management (DSPM) and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Data Security Posture Management (DSPM).

This report presents a comprehensive overview, market shares, and growth opportunities of Data Security Posture Management (DSPM) market by product type, application, key players and key regions and countries.

### 1 SCOPE OF THE REPORT

- 1.1 Market Introduction
- 1.2 Years Considered
- 1.3 Research Objectives
- 1.4 Market Research Methodology
- 1.5 Research Process and Data Source
- 1.6 Economic Indicators
- 1.7 Currency Considered
- 1.8 Market Estimation Caveats

### 2 EXECUTIVE SUMMARY

- 2.1 World Market Overview
  - 2.1.1 Global Data Security Posture Management (DSPM) Market Size (2021-2032)
  - 2.1.2 Data Security Posture Management (DSPM) Market Size CAGR by Region (2021 VS 2025 VS 2032)
  - 2.1.3 World Current & Future Analysis for Data Security Posture Management (DSPM) by Country/Region (2021, 2025 & 2032)
- 2.2 Data Security Posture Management (DSPM) Segment by Type
  - 2.2.1 Cloud Based
  - 2.2.2 On-premises
  - 2.2.3 Data Security Posture Management (DSPM) Market Size by Type
    - 2.2.3.1 Data Security Posture Management (DSPM) Market Size CAGR by Type (2021 VS 2025 VS 2032)
    - 2.2.3.2 Global Data Security Posture Management (DSPM) Market Size Market Share by Type (2021-2026)
- 2.3 Data Security Posture Management (DSPM) Segment by Delivery model
  - 2.3.1 Cloud-native DSPM
  - 2.3.2 Security platform?embedded DSPM
  - 2.3.3 Standalone DSPM
  - 2.3.4 Data Security Posture Management (DSPM) Market Size by Delivery model
    - 2.3.4.1 Data Security Posture Management (DSPM) Market Size CAGR by Delivery model (2021 VS 2025 VS 2032)
    - 2.3.4.2 Global Data Security Posture Management (DSPM) Market Size Market Share by Delivery model (2021-2026)
- 2.4 Data Security Posture Management (DSPM) Segment by Pricing model

- 2.4.1 Subscription-based
- 2.4.2 Usage-based pricing
- 2.4.3 Perpetual license and project-based delivery
- 2.4.4 Data Security Posture Management (DSPM) Market Size by Pricing model
  - 2.4.4.1 Data Security Posture Management (DSPM) Market Size CAGR by Pricing model (2021 VS 2025 VS 2032)
  - 2.4.4.2 Global Data Security Posture Management (DSPM) Market Size Market Share by Pricing model (2021-2026)
- 2.5 Data Security Posture Management (DSPM) Segment by Application
  - 2.5.1 BFSI
  - 2.5.2 Healthcare & Life Sciences
  - 2.5.3 Retail & E-commerce
  - 2.5.4 Telecommunications
  - 2.5.5 Technology & SaaS Providers
  - 2.5.6 Government & Defense
