This market is composed of vendors offering database platform as a service (dbPaaS) solutions. A dbPaaS offering is any database management system (DBMS) or data store engineered as a scalable, elastic, multitenant subscription service with a degree of self-management, and sold and supported by a cloud service provider (CSP), or by a third-party software vendor on CSP infrastructure. Access to system services — such as the OS and storage software — must be restricted. We do not include cloud infrastructure as a service (IaaS) services running hosted DBMS licenses in dbPaaS.
