Date Palm Products, or Date Fruits, are one of the few crop plants that could survive desert conditions, and became a reliable source of food in an otherwise inhospitable climate. Sumerian, Babylonian, Egyptian, and other ancient people used the palm for house construction and thatching as well as for food. It was spread across northern Africa along the coast and at oases by nomadic people, where it became a staple crop.

Dates are the fruit product of the date palm, a tree native to the Middle East and Africa. Date palms grow thick clusters of date fruits below their fronds. Unripe date fruits are green in color, and but they slowly turn yellow-orange as they mature. Fully ripe dates are a rich brown color with thick, glossy, sticky skin. The center of the sweet date flesh contains a small pit.

Market Drivers:
