DBA Ceramic Substrate is a highly heat-dissipating insulating substrate in which high-purity aluminum circuits are bonded on both sides of ceramic. This substrate is characterized by high reliability against temperature cycles, which is derived from the unique bonding technology of ceramics and aluminum. The DBA board can be used as a module by joining components on the upper side and cooling structure on the lower side. DBA is a new type of metal-attached ceramic substrate developed based on DBC process technology. It is a substrate formed by bonding aluminum and ceramic layers. Its structure is similar to DBC, and it can also etch various patterns like PCB. Globally,

the core manufacturer of DBA substrates is Mitsubishi Materials of Japan.
