DBDPE, short for decabromodiphenyl ethane, is a novel, high - efficiency, low - additive, and environmentally - friendly flame retardant. It is a white, odorless, uniform - granular chemical compound. With a high bromine content, good thermal stability, excellent UV resistance, and lower exudation than other brominated flame retardants, DBDPE is widely used in the production of flame - retardant materials for computers, fax machines, telephones, copiers, household appliances, and other electronic products. It is quite stable in the application system, and the thermoplastics containing it can be reused. DBDPE has less adverse impact on the properties of flame - retardant materials than the traditional flame retardant DBDPO and has good light resistance and low exudation. As a substitute for decabromodiphenyl ether (BDE209), DBDPE is being mass - produced and used due to the prohibition of traditional brominated flame retardants. However, as a new type of pollutant, its content in the environment and biological media is increasing rapidly.

United States market for DBDPE is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
