A DC-DC step-down switching controller is a power switching technology used to convert high-voltage DC power (such as 12V, 24V) to low-voltage DC power (such as 3.3V, 5V). The working principle of the DC-DC step-down switching controller is to control the average voltage value in the circuit by adjusting the on-off time ratio of the switching device by using the switching control of the switching device (such as

MOSFET, IGBT, etc.). This technology can realize high-efficiency, low-cost, stable and reliable DC power conversion, and is widely used in various electronic equipment, such as computers, communication equipment, household appliances, LED lighting, etc. DC-DC step-down switching controller has the advantages of fast response, wide adjustable range and high efficiency, so it has been widely used in power electronics. It should be noted that in the process of design and application, issues such as output ripple, EMI (electromagnetic interference), and thermal management need to be considered and resolved to ensure the stability and reliability of the circuit.
