DC-DC Converter ICs are devices designed to convert a source of DC (direct current) from one voltage to another. These type of devices are commonly used in portable electronic devices or any other devices that are powered from the battery instead of the external power source. The battery of the device supply power with its own voltage that might not be suitable for all internal circuits. DC-DC converter ICs ensure that required voltage is delivered to each circuit due to its own requirements. Converter ICs can both increase or decrease the voltage within the system, by storing the input energy temporarily and then releasing that to the output at a different level. DC-DC converter ICs also regulate the output voltage and maximise the energy harvest.

The global market for DC-DC Converter IC is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC DC-DC Converter IC market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States DC-DC Converter IC market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The Europe DC-DC Converter IC market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The China DC-DC Converter IC market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
