DC-DC Flyback Switching Regulator is a commonly used DC-DC switching regulator, which converts input voltage to output voltage through capacitors and transformers. The basic circuit of DC-DC Flyback Switching Regulator is composed of transformer, switching tube, diode and capacitor. The principle is to convert the input voltage into a

pulse signal through the switching action of the switch tube, and then output the output voltage from the secondary side of the transformer through the isolation and transformation of the transformer. The capacitor is used to smooth the output voltage waveform to ensure the stability of the output voltage. DC-DC Flyback Switching Regulator is often used in occasions that need to step up or step down the input voltage, such as LCD display screen, LED lighting, computer power supply, etc. It has the advantages of stable output voltage, simple structure and low cost.
