The DC electric vehicle charging station is an efficient charging facility specially designed for electric vehicles. It provides high-voltage DC power to directly charge the vehicle's battery, significantly shortening the charging time. Unlike AC charging stations, DC charging stations are equipped with high-power rectifier equipment to convert AC power into DC power and then transmit it to electric vehicles. This charging method can charge a large amount of electric energy into the battery of an electric vehicle in a short period of time, allowing it to complete the charging process within dozens of minutes to meet the needs of rapid travel.

The global DC Electric Vehicle Charging Station market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
