The global DC Pile Charging Power Module market size is predicted to grow from US\$ 1397 million in 2025 to US\$ 10784 million in 2032; it is expected to grow at a CAGR of 32.5% from 2026 to 2032.

DC Pile Charging Power Module is an important component for electric vehicle (EV) charging equipment. It typically includes a series of electronic components and a power management system that converts and manages electrical energy so that electric vehicles can charge efficiently. EV Charging Station Power Module is the only core product with technical threshold in the entire charging pile industry.

As the core component of the charging pile, the Power Module belongs to a large category of power supply products. Its core function is to convert the AC power in the grid into DC power that can charge the battery. The charging module not only provides energy and power, but also controls and converts the circuit, which ensures the stability of the power supply circuit and is suitable for charging various types of power batteries. The performance of the Power Module not only directly affects the overall performance of the charging pile, but is also related to charging safety issues, and is the core of building a high-power charging infrastructure.

Power Module is mainly composed of: semiconductor power devices, integrated circuits, magnetic components, PCB, capacitors, chassis fans, etc. The key of the Power Module is the MOS tube switch. When the charging module is working, the three-phase AC power supply is rectified and filtered, and then becomes a DC input voltage for the DC/DC conversion circuit. The controller acts on the power switch MOS tube through the drive circuit to convert the rectified and filtered DC voltage into an AC voltage, and the AC voltage at this time is pulse width modulated. Then, the AC voltage is

transformed and isolated by the high-frequency transformer, rectified and filtered again to obtain a DC pulse, and then charged to the battery pack.

In 2025, global DC Pile Charging Power Module sales reached approximately 3,283.3 k units, with an average global market price of around US\$ 435 per unit. The single-line production capacity is about 50 k units, and the industry gross profit margin is about 28%.

The main players in the global DC Pile Charging Power Module include Infypower, UUGreenPower, TELD, Tonhe Electronics Technologies, Huawei, etc. Chinese companies have made rapid technological progress and their market share has grown rapidly.

The DC charging pile module is the core technology of modern new energy vehicle fast charging stations. With the growth of the electric vehicle market, this field is developing rapidly and evolving towards higher power, higher efficiency and greater intelligence.

Since liquid-cooled charging technology requires an efficient heat dissipation system, precise temperature control management, and high reliability, companies that master core liquid cooling technology have a competitive advantage.
