The global DC Slotless Motor market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The DC slotless motor is a specially designed brushless DC motor, which is different from the traditional slotted motor. It eliminates the slot structure on the stator and adopts a smooth stator with the windings directly wound on the outside of the stator. This design reduces the hysteresis between the rotor and the stator, reduces the torque fluctuation (i.e. the cogging effect), making the motor run more smoothly and more efficiently, and the performance is particularly superior at low speeds.

United States market for DC Slotless Motor is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
