The DC/RF probe station is a precision equipment used in the semiconductor industry, especially for electrical performance testing of semiconductor chips, integrated circuits and other microelectronic devices. It combines a precise mechanical structure, a high-performance probe needle and an electrical performance test instrument to achieve direct electrical performance testing of semiconductor devices.

The radio frequency (RF) probe station is particularly suitable for S parameter testing, intermodulation testing, gain compression testing, etc. of RF chips. Radio frequency (RF) refers to electromagnetic frequencies that can be radiated into space, ranging from 300kHz to 300GHz. RF probe stations are able to handle this high-frequency current. The microwave band (300MHz-300GHz) is the higher frequency band of radio frequency, and RF probe stations are particularly widely used in this frequency band.

The global DC/RF Probe Station market size is projected to grow from US\$ 1266 million in 2024 to US\$ 1894 million in 2030; it is expected to grow at a CAGR of 7.0% from 2024 to 2030.

LP Information, Inc.
