DCV directional control valve is a commonly used hydraulic control component, which is also known as directional control valve. It is usually used in hydraulic systems to control the flow direction of hydraulic oil, thereby controlling the direction and speed of movement of executing components (such as hydraulic cylinders, hydraulic motors, etc.). DCV directional control valves are usually composed of valve bodies, valve cores, springs, sealing rings, and other components. By changing the position of the valve core, the flow direction of hydraulic oil can be changed, thereby achieving operations such as forward and reverse rotation, acceleration and deceleration in the hydraulic system. The DCV directional control valve has the characteristics of simple structure,

convenient operation, and high reliability, and is widely used in various hydraulic systems, such as machine tools, metallurgical equipment, ships, aerospace, and other fields.
