The global DDoS Scrubbing Appliance market size is predicted to grow from US\$ 1784 million in 2025 to US\$ 4530 million in 2032; it is expected to grow at a CAGR of 14.3% from 2026 to 2032.

A DDoS Scrubbing Appliance is a specialized network security device designed to detect, filter, and mitigate Distributed Denial-of-Service (DDoS) attacks. It works by analyzing incoming network traffic, identifying malicious packets or abnormal traffic patterns, removing attack traffic (?scrubbing?), and allowing only legitimate traffic to pass through to the target server, data center, or network infrastructure. These appliances are commonly deployed in ISPs, cloud data centers, enterprise networks, and telecom infrastructures to ensure service availability and network stability during cyberattacks. In 2025, global DDoS Scrubbing Appliance production reached approximately 5,700 units, with an average global market price of around US\$ 320,000 per unit. Annual production capacity is 7,000 Units. Gross Profit Margin: 52%. The DDoS scrubbing appliance industry chain is structured around three core layers: upstream semiconductor and networking component suppliers, midstream equipment manufacturers, and downstream network operators and enterprises. Upstream inputs include high-performance NPUs/ASICs, server-grade CPUs, high-speed memory, and 100G-800G optical modules, which determine the throughput ceiling of scrubbing systems. Midstream vendors such as NETSCOUT, Radware, A10 Networks, and Fortinet integrate these components into carrier-grade appliances or hybrid mitigation platforms. Downstream demand is driven by telecom operators, cloud providers, large enterprises, and CDN/edge networks, where service continuity and attack resilience are critical. DDoS scrubbing appliances represent a highly infrastructure-dependent security segment, where value is concentrated in performance scalability rather than unit volume. The market is increasingly polarized between high-end carrier-grade hardware

systems and cloud-native scrubbing services, with hybrid architectures becoming the dominant trend. In the long term, growth will be driven by escalating attack bandwidth, expansion of edge computing, and stricter regulatory requirements for network resilience, which together sustain demand for both physical appliances and distributed mitigation systems.

United States market for DDoS Scrubbing Appliance is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for DDoS Scrubbing Appliance is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
