The global De-Oiled Flour market size is predicted to grow from US\$ 165 million in 2025 to US\$ 222 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

De-oiled flour is rich in protein, fiber, vitamins, and minerals, where it adds its flavor to the final product.

Consumers are seeking out de-oiled flours that offer specific functional benefits or cater to unique dietary needs. Specialized varieties of de-oiled flour, such as almond flour, coconut flour, or chickpea flour, are gaining popularity due to their specific nutritional profiles and functional properties. These specialty de-oiled flours are used in a variety of applications, including gluten-free baking, high-protein snacks, and plant-based food products. There is a growing demand for de-oiled flour products that have clean label ingredients and minimal processing. Consumers are increasingly seeking natural and minimally processed alternatives to traditional flours. Manufacturers are responding by offering de-oiled flours that are free from artificial additives, preservatives, and genetically modified organisms (GMOs). This trend aligns with the overall clean-label movement in the food industry. The availability of de-oiled flours has expanded beyond specialty health food stores to mainstream supermarkets and online platforms. This broader distribution enables easier access for consumers, driving market growth. Increased availability and visibility also contribute to consumer awareness and adoption of de-oiled flour products. As the demand for plant-based protein sources continues to grow, de-oiled flours are being recognized for their high protein content and nutritional value. De-oiled flour derived from legumes, seeds, and nuts provides an alternative protein source for both vegetarian and flexitarian consumers. The versatility of de-oiled flours allows them to be used in a wide range of plant-based products, including meat alternatives, protein bars, and snacks. Manufacturers and food technologists are continually innovating to expand the applications of de-oiled flours. They are developing

new formulations, blends, and recipes that incorporate de-oiled flour for enhanced taste, texture, and nutritional profiles. These innovations help to expand the market by offering consumers a wider range of options for incorporating de-oiled flour into their diets. With the increasing prevalence of gluten sensitivity and food allergies, there is a growing demand for gluten-free and allergen-free products. De-oiled flours, such as almond flour or chickpea flour, are naturally gluten-free and can serve as substitutes for wheat-based flours. This trend is driving the use of de-oiled flour in gluten-free baking and as a replacement for common allergens like soy, dairy, and nuts.
