Decentralized Green HVAC refers to a heating, ventilation, and air - conditioning system that is designed to be distributed rather than centralized, and incorporates environmentally - friendly and energy - efficient technologies. This type of system consists of multiple smaller - scale HVAC units located in different areas or zones of a building, allowing for more precise control of temperature, humidity, and air quality in each specific space. It often utilizes renewable energy sources such as solar - powered air - conditioning units or geothermal heat pumps, and employs advanced control algorithms and smart technologies to optimize energy consumption. Decentralized Green HVAC systems aim to reduce the overall environmental impact of building climate control while providing comfortable and healthy indoor environments for occupants.
