A Declutchable Gearbox is a type of gearbox designed to allow the operator to temporarily disengage or "declutch" the gears in the transmission system, effectively isolating the driving force from the driven component. This disengagement is often used in various industrial, automotive, or mechanical systems to provide flexibility in operation, facilitate manual control, prevent damage, or ease maintenance.

The "declutch" feature typically refers to the ability to temporarily disengage the power transmission between the input and output shafts of the gearbox, enabling the system to operate either in a manual or free-wheeling mode.
